

Sr.No.	Heading	Particulars		
1	Description the course :	Core Java course focuses on tea	ching students	
	Including but Not limited to:	how to design, develop, and ma	aintain	
	340	software applications using the	Java	
		programming language. The co	urse covers	
		fundamental to advanced conce		
		enabling students to understan		
		oriented programming (OOP) p		
		structures, algorithms, and real	-world	
	Name and the second sec	application development.		
2	Vertical :	Major		
3	Type:	Theory	-1	
4	Credits :	2 credits (1 credit = 15 Hours fo	or Theory in a	
	The state of All and the state of the state	semester, Total 30 hours)		
5	Hours Allotted :	30 Hr		
6	Marks Allotted:	50		
7	Course Objectives(CO): CO 1: Understand and Apply Object-Orie	ented Programming (OOP)		
	Concepts.	ented Programming (OOP)		
		class and object in Java including	•	
	CO 2: Identify the key components of a class and object in Java, including attributes (fields), methods, and constructors.			
	CO 3: Apply sound software engineering principles in Java by organizing			
	code into classes and methods with proper access control identifiers			
	CO 4: Use tools and techniques like unit testing, as well as IDE			
	debugging tools to find and fix issues within Java programs.			
	CO 5. Effectively use Java's collection framework (e.g., Lists, Sets, Maps) to			
	manage and process groups of related objects.			
	CO 6. Use OOP concepts in designing and building solutions to real-world			
	problems, ensuring the application	n is modular, maintainable, and		
	reusable.			
8	Course Outcomes (OC):			
		Java and its runtime environmen		
		va's data types, control flow st		
	OOP principles such as classes, in OC3. Creating own classes and		ıg.	
		ng Class, Interface and exception	handling	
9	Modules:-	ing class, interface and exception	Handing	
-	Module 1:			
	Introduction to Java Programming	g-History of Java and its

9 Module 1

30 Hrs

- 1. Write a program
 - a. in Java to demonstrate Boolean value.
 - b. Print a string 10 times using a for loop.
 - c. Write a program in Java to evaluate a+b*c%d.
- 2. Write a program
 - a. in Java to find the biggest element among three numbers using if else.
 - b. Write a program in Java to find the biggest element among three numbers using the ternary operator.
 - c. Write a program in Java to check the grade of marks using a switch case.
- 3. Write a program
 - a. in Java to demonstrate dynamic initialization.
 - b. Write a program in Java to create a class and access all data members and methods using the object and compute the area and perimeter of a circle.
 - c. Write a program in Java to access member variables using the constructor.
- 4. Write a program
 - a. in Java to multiply two matrices.
 - b. Write a program in Java to calculate the area of a rectangle using single inheritance.
 - c. Write a program in Java to demonstrate multilevel inheritance.
- 5. Write a program
 - a. in Java to demonstrate hierarchical inheritance.
 - b. Write a program in Java to find the area and perimeter of a circle using an abstract class.
 - c. Write a program in Java to show that a private member of a class cannot be inherited.

6. Write a program

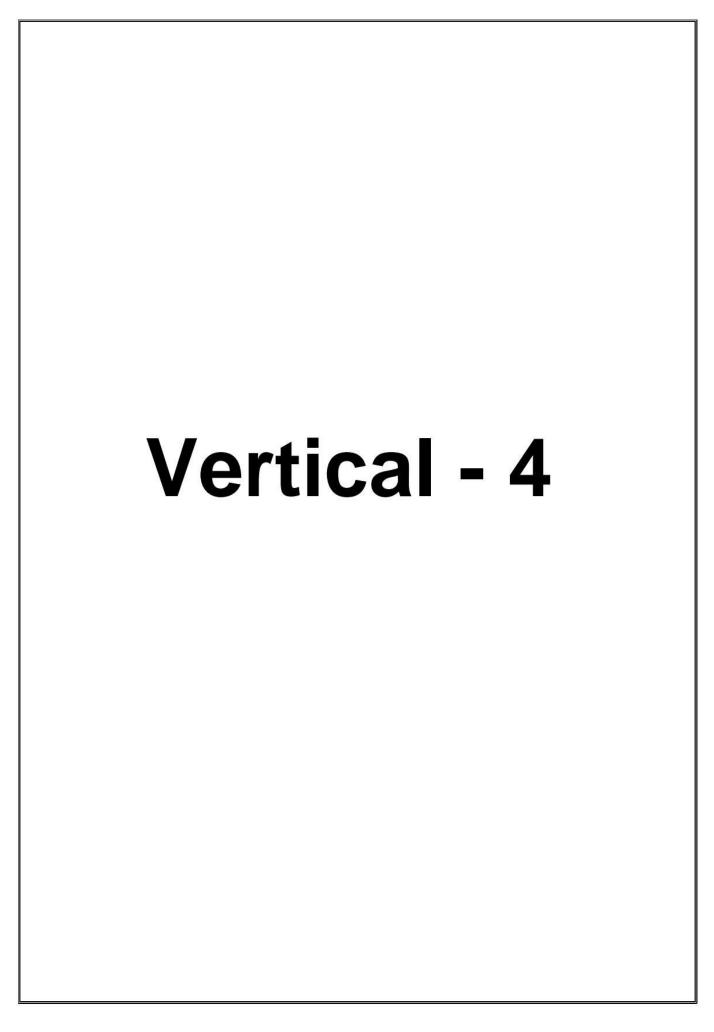

- a. in Java to find the volume of a box using this keyword.
- b. Write a program in Java to find the average of three numbers using the method overloading
- c. Write a program in Java to find average of three numbers using method overriding.
- d. Create a class figure. Create two subclasses rectangle and triangle. Find the area of a rectangle and half the area of the rectangle using the reference of the figure.

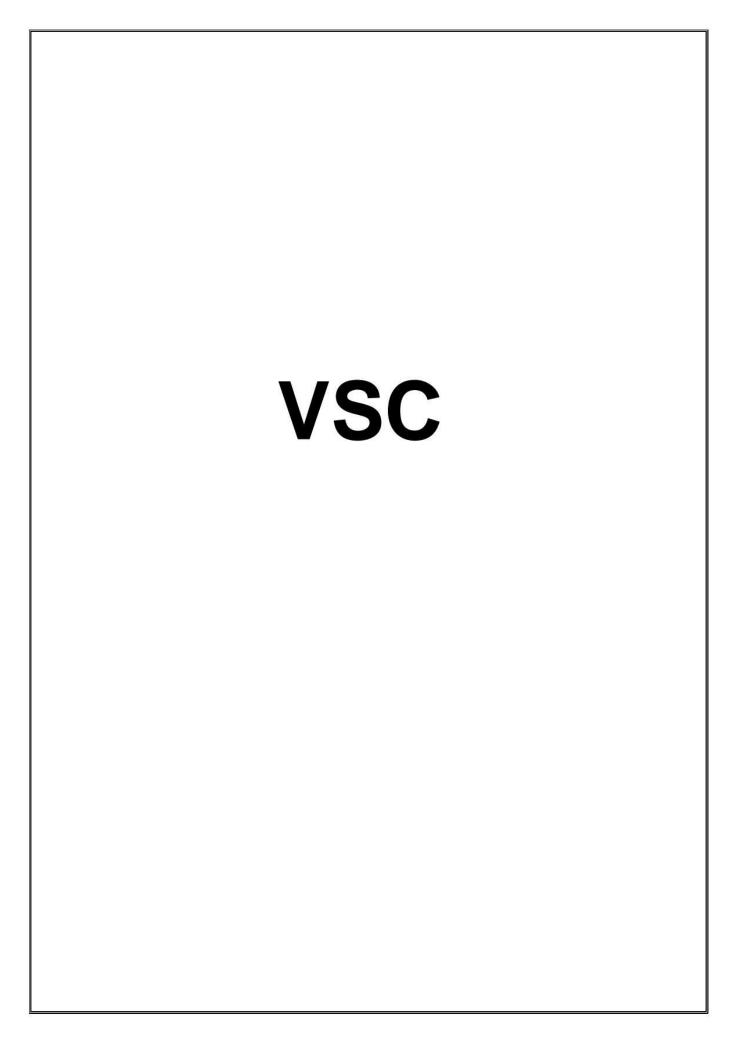

7. Write a program

- a. Create an interface area. Find the area of a circle.
- b. Write a program in Java to find the sum and average of three numbers using the super keyword.
- 12. Write a program

a. in Java to find the volume of a box using constructor	
overloading.	
b. Write a program in Java to demonstrate exception handling in	n
case of variable/constant divided by zero.	
13. Write a program in Java	
a. to implement multiple inheritance using the interface.	
b. Write a program in Java to check if a given string is palindrom	ie
or not.	
14. Write a program in Java	
a. for sorting a given list of strings in ascending order.	
b. Write a program in Java to find the factorial of a number usin	g
the package.	
15. Write a program in	
a. Java to import the package.	
b. Write a program in Java to implement thread.	
c. Write program to implement Flow, Grid and Border Layout using	
swing.	
d. Write program to demonstrate following events Action	
Mouse Key	
Module 2	30 Hrs
Configuring LAN setup	
a. Planning and Setting IP networks	
b. Configuring subnet	
c. Using, linux-terminal or Windows-cmd, execute following networking	g
commands and note the output: ping, traceroute, netstat, arp,	
ipconfig, Getmac, hostname, NSLookUp, pathping, SystemInfo	
2. IPv4 Addressing and Subnetting	
a. Given an IP address and network mask, determine other information	i
about the IP address such as:	
a. Network address • Network broadcast address • Total	
b. number of host bits • Number of hosts	
b. Given an IP address and network mask, determine other information	1
about the IP address such as:	
c. The subnet address of this subnet •	
d. The broadcast address of this subnet •	
e. The range of host addresses for this subnet •	
f. The maximum number of subnets for this subnet mask •	
g. The number of hosts for each subnet •	
h. The number of subnet bits •The number of this subnet	
3. Configure Static IP routing using .	
4. Configure IP routing using RIP.	
5. Configuring Simple and multi-area OSPF	
6. Configuring BGP protocol (Multi-Autonomous)	
7. Configuring server and client.	
a. Configure DHCP b. Configure DNS	
d. Configure Telnet e. Configure FTP	
8. Configure FTP 8. Configure basic security features for networks	
9.Using Wireshark, network analyzer, set the filter for ICMP, TCP, HTTP, UDF	,
FTP and perform respective protocol transactions to show/prove that the	

	network analyzer is working		
	10.create a wireless network of multiple PCs using appropriate access point. 11.IPV6 Addressing Basics

Syllabus B. Sc. (nformation Technology) (Sem.- III)

Title of Paper APPLIED MATHEMATICS

Sr.No.	Heading	Particulars
1	Description the course : Including but Not limited to:	This course is designed for developing competency of the students in the applications of various mathematical concepts. It is equipped with Complex numbers, Laplace transform Inverse Laplace transform, Differential equations of first order with first degree and higher degree This course introduces basic concepts of Algebra and prepares students to study further courses in linear and abstract algebra.
2	Vertical :	Vocational Skill Course
3	Type:	Theory
4	Credits :	2 credits (1 credit = 15 Hours for Theory in a semester, Total 30 hours)
5	Hours Allotted :	30 Hours
6 7	Marks Allotted:	50 Marks
	Course Objectives(CO): CO1: Ability to interpret the mathematical results in physical or practical terms for complex numbers. CO2: Know and to understand various types of methods to solve Laplace transform. CO3: Apply the knowledge of Laplace Transforms to solve the problems. CO4: Know and to understand various types of methods to solve differential equation CO5: Apply the knowledge of differential equations to solve the problems. CO6: Inculcate the habit of Mathematical Thinking through Indeterminate forms.	
8	Course Outcomes (OC): OC 1. Familiar with the various forms at OC 2: Find the Laplace transform of a function of the OC 3: Find the Inverse Laplace transform OC 4: Solve Differential equations of fire OC 5: Solve Differential equations of fire	unction of using definition. m of a function of using definition. st degree and first order.
9	Modules:- Module 1:	
	Graphical representation of complex nof complex numbers. Polar form of x+i form of complex numbers, Mathematical their representation on Argand's Dialongles, Definition of hyperbolic functions, Inverse hyperbolic 1.2 The Laplace Transform: Introduction	agram, Circular functions of complex tion. Relations between circular and

	¥		
	Laplace Transformation, First Shifting Theorem, Second Shifting Theorem, Convolution Theorem, Laplace Transform of Derivatives. 1.3 Inverse Laplace Transform: Shifting Theorem, Partial fractions Methods, Use of Convolution Theorem, Solution of Ordinary Linear Differential Equations with Constant Coefficients, Laplace Transformation of Special Function, Periodic Functions, Heaviside Unit Step Function, Dirac-delta Function (Unit Impulse Function). Module 2:		
	2.1 Equation of the first order and of the first degree: Separation of variables, Equations homogeneous in x and y, Non-homogeneous linear equations, Exact differential Equation, Integrating Factor, Linear Equation and equation reducible to this form, Method of substitution. 2.2 Differential equation of the first order of a degree higher than the first: Introduction, Solvable for p (or the method of factors), Solve for y, Solve for x,		
	Clairaut's form of the equation, Method of Substitution.		
	2.3 Linear Differential Equations with Constant Coefficients: Introduction, The Differential Operator, Linear Differential Equation $f(D)$ $y = 0$, Different cases depending on the nature of the root of the equation $f(D) = 0$, Linear differential equation $f(D)$ $y = X$, The complimentary Function, The inverse operator $1/f(D)$ and the symbolic expression for the particular integral,

Title of Paper: Computer Graphics

Sr.No	Heading	Particulars
1	Description the course :	
	Including but Not limited	Computer Graphics Practical is a hands-on course designed
	to:	to introduce students to the foundational principles of
		computer graphics, including 2D transformations, graphical
		modelling, and basic animations. The course focuses on
		applying mathematical concepts like translation, rotation,
		scaling, and shearing to create and manipulate graphical
		objects. Students will learn to use programming tools such as
		Python (Matplotlib, Pygame, OpenCV) or C/C++ libraries to
		implement these concepts. Through practical assignments,
		they will develop the skills to create simple 2D animations,
		simulate real-world objects, and design graphical scenes. The
		course bridges the gap between theoretical concepts and
		real-world applications, fostering creativity and problem-
_	Mantiania.	solving in visual computing.
2	Vertical :	Skill Enhancement Course
3	Type : Credits :	Practical 2 and the (20 Hours of Practical work in a semester)
		2 credits (30 Hours of Practical work in a semester)
5	Hours Allotted :	30
6	Marks Allotted:	50 Marks
7	Course Objectives(CO):	
	CO1: Introduce foundationa	Il concepts of 2D transformations, geometric modelling, and
	rendering techniques in con	nputer graphics.
	CO2: Develop skills to apply	2D transformations (translation, rotation, scaling, shearing,
	reflection) and basic animat	ions.
	CO3: Enable students to sim	ulate real-world objects and create simple animations.
	CO4: Equip students to und	derstand graphics pipelines, coordinate systems, and basic
	rendering principles.	
	CO5: Foster creativity and	logical thinking by implementing graphical scenes and
	animations.	
8	Course Outcomes (OC):	
	OC1: Understand and apply	2D transformation matrices to graphical objects.
	OC2: Implement simple grap	phics primitives and manipulate them using transformations.
	OC3: Create basic 2D anima	tions (e.g., bouncing ball, rotating shapes).
	OC4: Understand and utilize	color models, coordinate systems, and graphical libraries.
	OC5: Develop basic graphi	cal applications using lightweight tools and programming
	languages.	

)	Module 1	30 Hrs
	Module 1: Basic Setup and 2D Graphics Fundamentals	
	Installing Required Software	
	Objective: Install and configure Python, Matplotlib, OpenCV,	
	or Pygame for computer graphics.	
	 Task: Verify the installation and create a "Hello, Graphics!" 	
	window.	
	Drawing Basic Shapes	
	Objective: Draw lines, circles, rectangles, and polygons using	
	graphical primitives.	
	Tool: Python with Matplotlib or OpenCV.	
	3. Line Drawing Algorithms	
	Objective: Implement the DDA (Digital Differential Analyzer)	
	algorithm.	
	Tool: Python or C++. A Procent and Line Drawing Algorithm	
	4. Bresenham's Line Drawing Algorithm	
	 Objective: Implement Bresenham's line drawing algorithm. Tool: Python or C++. 	
	5. Circle Drawing Algorithms	
	Objective: Implement the Midpoint Circle algorithm.	
	Tool: Python or C++.	
	6. Polygon Filling	
	Objective: Implement the boundary-fill and flood-fill	
	algorithms.	
	Tool: Python or C++.	
	7. Translation Transformation	
	 Objective: Shift a 2D object using translation matrices. 	
	Tool: Python with Matplotlib.	
	8. Rotation Transformation	
	Objective: Rotate a 2D object about a fixed point or origin.	
	Tool: Python with Matplotlib.	
	9. Scaling Transformation	
	Objective: Scale a 2D object up or down using scaling	
	matrices.	
	Tool: Python with Matplotlib. 10. Reflection Transformation	
	Objective: Reflect a 2D object across x-axis, y-axis, and	
	diagonal.	
	Tool: Python with Matplotlib.	
	11. Shearing Transformation	
	Objective: Apply x-axis and y-axis shearing to a 2D object.	
	Tool: Python with Matplotlib.	
	12. Composite Transformations	
	Objective: Combine translation, rotation, and scaling on a 2D	
	object.	
	Tool: Python with Matplotlib.	
	13. Clipping Algorithms	
	Objective: Implement the Cohen-Sutherland line clipping	
	algorithm.	

Tool: Python or C++.	
 Tool: Python or C++. 	etion ct from a window to a viewport.
 15. Basic Interactive Graphics Objective: Create a simple (e.g., moving a rectangle v Tool: Python with Pygame 	
Module 2	30 Hrs
 Simple Animation Objective: Animate a mov Tool: Python with Pygame 	TO BE THE RESERVE OF THE SECOND SECON
 Bouncing Ball Animation Objective: Create a bounce Tool: Python with Pygame 	sing ball with collision detection.
 3. Rotating Object Animation Objective: Animate a rota Tool: Python with Pygame 	
Scaling Animation Objective: Create an anim (grow/shrink). Tool: Python with Matplo	nation showing pulsating objects
 Multiple Object Animation Objective: Animate multiple Tool: Python with Pygame 	ole objects moving independently.
Color Models Objective: Experiment wit Tool: Python with OpenCV	th RGB and HSI color models. V.
 7. Bezier Curves Objective: Draw and anim Tool: Python with Matplo 	Application of the control of the co
 8. 2D Game Development Basics Objective: Create a simple obstacles). Tool: Python with Pygame 	e 2D game (e.g., a ball avoiding
 9. Scene Creation Objective: Design a basic 3 sun). Tool: Python with Matplo 	2D scene (e.g., a house, tree, and tlib.
2D graphics. Tool: Python with Pygame	rallax scrolling for a background in
11. Path AnimationObjective: Animate an objecth.	ject moving along a predefined

10		:		
	Tool: Python with Matplotlib.			
	12. Collision Detection			
	Objective: Implement collision detection between 2D			
	objects.			
	Tool: Python with Pygame.			
	13. Interactive Graphics with Mouse Input			
	Objective: Create an interactive program where shapes			
	follow mouse clicks.			
	Tool: Python with Pygame. 14. Tout Bondaring.			
	14. Text Rendering			
	Objective: Render and animate text in a 2D graphical			
	environment.			
	Tool: Python with Pygame. 15. Final Project.			
	15. Final Project Objective: Combine multiple concents to create a complete			
	Objective: Combine multiple concepts to create a complete animated 2D scene.			
	Example: A car moving on a road with a rising sun and trees.			
	Tool: Python with Matplotlib or Pygame

Syllabus B. Sc. (Information Technology) (Sem.- IV)

Title of Paper Mobile Programming

Sr.No	Heading	Particulars	
1	Description the course :	This course introduces the fundamentals of	
	Including but Not limited to:	Flutter and Dart for building cross-platform	
	7893	mobile applications. Students will learn to	
		create responsive user interfaces, manage app	
		state, handle user inputs, and implement	
		navigation and animations. The course also	
		covers integrating APIs, working with	
		databases, and deploying functional mobile	
		apps for Android and iOS.	
2	Vertical :	Skill Enhancement Course	
3	Type:	Practical	
4	Credits:	2 credits (30 Hours of Practical work in a	
		semester)	
5	Hours Allotted :	30	
6	Marks Allotted:	50 Marks	
7	Course Objectives(CO):		
	CO1: Understand the fundamentals of Flutter and Dart programming for mobile app		
	development.		
	CO2: Learn how to set up the Flutter SDK and development environment.		
	 CO3: Develop skills to create basic Flutter applications using widgets like Text, Row, and Column. CO4: Explore the use of StatelessWidget and StatefulWidget for managing app states. CO5: Master the implementation of responsive UIs using MediaQuery and layouts. CO6: Gain knowledge of form creation, input handling, and validation in Flutter apps. CO7: Learn to navigate between screens and implement app navigation features like 		
	drawers.		
	CO8: Understand how to use Flutter animations, including AnimatedContainer and		
	FadeTransition.		
	CO9: Explore database integration with APIs using packages like http and		
	FutureBuilder.	gs 82 (52) Water Mr 19	
		user interactions (e.g., taps and long presses), and	
	custom styling.		
ĺ			

8	Course Outcomes (OC):		
	OC1: Demonstrate the ability to configure Flutter and build a functional of	levelopment	
	environment.		
	OC2: Create and run basic Flutter apps with appropriate UI components.	i.	
	OC3: Develop responsive and adaptive UIs for multiple screen sizes.		
	OC4: Implement interactive features like counters, sliders, and switch	es in Flutter	
	apps.		
	OC5: Design and validate user input forms using TextFormField.		
	OC6: Develop navigation flows between screens and integrate drawers for		
	usability.		
	OC7: Create animations for smooth transitions and enhanced user exper	riences.	
	OC8: Build applications that fetch and display data from public APIs asyn	chronously.	
	OC9: Apply effective state management strategies to handle app states	efficiently.	
	OC10: Demonstrate the ability to debug, test, and optimize Flutter apps		
	deployment.	32.03	
9	Module 1	30 Hrs	
80	Install Flutter SDK on your computer and run the flutter doctor		
	command to check your setup.		
	2. Create a "Hello, World!" Flutter application and run it on an		
	emulator.		
	3. Modify the app's title and primary color in the MaterialApp widget.		
	4. Create a StatelessWidget that displays a greeting message.		
	5. Write a Dart program to calculate the sum of two numbers entered		
	by the user. 6. Implement a Dart program that uses if-else statements to		
	determine if a number is odd or even.		
	7. Demonstrate the use of a switch-case statement in Dart.		
	8. Write a program to print a multiplication table using a for loop.		
	9. Create a Flutter app with a Text widget that displays your name.		
	10. Build an app with a Column widget to arrange multiple Text		
	widgets vertically.		
	11. Use a Row widget to arrange three buttons horizontally.		
	12. Create a Flutter app using Scaffold with an AppBar, Body, and a FloatingActionButton.		
	13. Create a simple counter app using StatefulWidget to increment		
	and display a number.		
	14. Implement a TextField widget to accept user input and display it		
	using a Text widget.		
	15. Design a Flutter app with a Container widget and customize its		
	padding, margin, and color.		
	padding, margin, and color. Use the Stack widget to overlay a Text widget on an Image.	30 Hrs	
	padding, margin, and color. Use the Stack widget to overlay a Text widget on an Image. Module 2	30 Hrs	
	padding, margin, and color. Use the Stack widget to overlay a Text widget on an Image.	30 Hrs	
	padding, margin, and color. Use the Stack widget to overlay a Text widget on an Image. Module 2 1. Build a responsive UI using MediaQuery to adapt to different screen	30 Hrs	
	padding, margin, and color. Use the Stack widget to overlay a Text widget on an Image. Module 2 1. Build a responsive UI using MediaQuery to adapt to different screen sizes. 2. Create a Flutter form with TextFormField widgets to accept a username and password.	30 Hrs	
	padding, margin, and color. Use the Stack widget to overlay a Text widget on an Image. Module 2 1. Build a responsive UI using MediaQuery to adapt to different screen sizes. 2. Create a Flutter form with TextFormField widgets to accept a	30 Hrs	

	5. Create a Drawer widget for app navigation			
	6. Display a list of items in a ListView widget.			
	7. Use the GridView widget to display a grid of images.			
	8. Add a GestureDetector to detect taps and display a message in the console.			
	9. Implement a LongPress event to change the color of a container.			
	10. Create a basic animation using the Anim			
	11. Implement a FadeTransition to animate the opacity of a widget.			
	12. Use a Slider widget to select a value between 0 and 100 and display the value.			
	13. Create a Switch widget to toggle between two themes (light and dark).			
	14. Use the http package to fetch and displa	y data from a public API.		
	Create a FutureBuilder widget to display da	ta asynchronously.
